

Release Date: March 2, 2022

Salton Sea Restoration Concept Information Template

Parties interested in submitting ideas or concepts for Salton Sea restoration (not involving water importation from outside of the basin) to be included in the Long-Range Plan should provide the information requested below. Ideas submitted will become property of the State and will not be compensated. Please do not submit proprietary information. Submittals will be reviewed by the State team and made available to the Long-Range Plan Committee. Concepts will be reviewed for technical merit and practicality and may be included as part of one or more restoration concepts evaluated in the Plan.

Please include a narrative description of the concept and how it will benefit the Sea. The description should include a map showing proposed locations, water source (must be from inside Salton Sea watershed), water supply requirement, proposed salinity of any habitat features, and any information available to date on engineering feasibility, land use and ownership, impacts to water and wildlife, project development schedule and cost. Concepts could include habitat or other water features, recreational ideas, and concepts for dust control.

Please provide the information shown on the following page.

Map: Concepts can be sketched on the attached map.

Attach: Any available non-proprietary information on engineering feasibility, land use and ownership, impacts to water and wildlife, project development schedule and cost

To ensure consideration in the planning process, completed templates should be submitted by 2 April 2022 to the following email address: cnra-saltonsea@resources.ca.gov.

If concepts are unclear, readily determined to be infeasible, or lack necessary information, the State team may disregard the concept from further consideration. Concepts received after 2 April 2022 will be considered, schedule permitting.

Note: An independent evaluation of restoration concepts that include water importation is underway. The findings from this independent evaluation will be incorporated into the Long-Range Plan.

Salton Sea Restoration Concept

Concept Name:

Brief Overview and Benefit of Concept:

Water Source:

Water Supply Requirement:

Salinity (freshwater or saltwater):

Recreational Opportunities or Features:

Name of Submitter:

Date Submitted:

Email Address:

Map: Sketch concept on map shown below that includes projects that are part of the 10-Year Plan.
